PRESS RELEASE W440 AIS SART Sniffer

METS 2012 – WAMBLEE SRL, STAND No. 05.212 Hall 5

This device, when connected to an AIS ¹ receiver, is capable of recognising SART type AIS sentences, which it does by detecting previously memorised equipment ID codes (such as from our own MOB AIS W420).

When a MOB AIS device is recognised by the previously memorised code, the W440 causes an auxiliary electrical contact to close. This could be used as an expander of a secondary alarm system or to stop the vessel's engine – a particularly useful function for those sailing single-handed.

The W440 comes in a DIN guide casing so that it can be installed easily onto the vessel's own electric control panel. It can also be installed, together with its relative accessories, without using the DIN guide.

The W440 is controlled by a luminous selector (supplied on request) which can be used to command all programming and operation functions.

The W440 is an EC equipment and is available now at 170 Euro + VAT.

1: The AIS receiver must be equipped with an NMEA 0183 port which can provide !AIVDM-type sentences.
