PRESS RELEASE

W470 MOB (Man Overboard)

Personal safety electronic devices

METS 2017 – STAND WAMBLEE SRL No. 05.153 Hall 5

Faenza, Italy – 1st September 2017

For all the professional operators who work at sea on commercial, fishing or military vessels or on offshore platforms, there is an important novelty regarding “safety at sea”: **new personal safety MOB devices (Man Overboard)** called **W470**, is available on the market. It will be presented for the first time by the Italian company Wamblee srl at 2017 **Mets Show edition**, in Amsterdam.

This device is essential in case of an emergency like the accidental fall of one or more persons into the sea waters or the vessel sinking. In such cases it is crucial that fallen people are localized and saved the soonest as possible and it is also vital that the device can work even if the person is wounded or has lost consciousness.

The W470 safety device can be fixed to self-inflatable jackets via the tear-to-open tape retainer or via the handy clip provided for fixing to the inflating mouthpiece.

The device starts automatically when its sea-sensors come into contact with the sea water but it can also be started manually by the operator by pressing the Test/Activation pushbutton. Its special design (It is equipped with a mechanical lock preventing unwanted activation or deactivation) and the layout of the controls positioned on the front part make **easy and safe any test or activation operation** by the operator, even if he is wearing industrial gloves.

After activation, the safety device emits a number of SAR signals: the W470 emits an AIS SART message and a homing signal at 121.5 Mhz.

Together with the emission of the radio signals, the device has a high efficiency flashing light that starts and aids localisation of the person in conditions of poor visibility.

The device is also available in ATEX version.

WamBlee® W470 MOB device is completely designed and produced in Italy and it combines characteristics of **technology, quality and reliability**, all essential when it comes to safety at sea.
